João Pessoa, Paraíba, Brazil

Frontend/Mobile Developer and Computer Science graduate (UFCG), with experience in JavaScript, TypeScript, React, Next.js, Angular and React Native. I work mainly with financial-sector products, from the architectural setup of new projects to the modernization of large-scale legacy systems. Day to day, I work on decoupling architectures, integrating REST APIs, automating tests and CI/CD pipelines, keeping the codebase standardized and delivery continuous.

Experience

Frontend Developer Sep 2026 - Present
Lifters Tecnologia *João Pessoa, Paraíba, Brazil*

- Structuring the API's multi-tenancy layer (Node.js, NestJS, PostgreSQL) for an iGaming platform's backoffice, ensuring data isolation between clients and eliminating the risk of cross-tenant data leaks.
- Development of the platform's interfaces in React and TypeScript, with reusable, standardized components aligned with the product's design system.
- Structuring the architectural setup of the backoffice, API and infrastructure (monorepo) for an iGaming platform, standardizing the technical foundation used across squads.
- Active participation in code reviews and technical architecture decisions for the backoffice and platform interfaces, contributing to code quality and consistency across squads.

Frontend Developer Aug 2025 - Aug 2026
Blockfy *Campina Grande, Paraíba, Brazil*

- Structuring the frontend (React, Next.js) for Harpia AI, an AI agent that analyzes legal documents of up to 3,000 pages, with a focus on performance and scalability.
- Implementation of interfaces with Tailwind CSS and reusable, standardized components (foundation for a design system), ensuring visual consistency and responsiveness.
- Implementation of complex layouts and strategic screens with Server Components and SSR in Next.js, optimizing performance and user experience.
- Integration with REST APIs and state management via Context API, with active participation in code reviews and architecture decisions.

Frontend Developer Apr 2023 - Aug 2025
Beeteller *Campina Grande, Paraíba, Brazil*

- Development of new financial features in Angular for the Pago Parcelado system, enabling the processing of payments for GRUs, taxes and court fees, with 300K+ transactions and R$72M+ processed in the first 30 days of integration with PagTesouro.
- Building and maintenance of a shared component library reused across Web (React/Next.js) and Mobile (React Native/Expo), reducing code duplication.
- Implementation of 3DS (Three-Domain Secure) security integration in checkout flows, raising authentication levels and reducing credit card fraud rates.
- Evolution and maintenance of legacy Angular systems, supporting operations across more than 40,000 points of sale worldwide.
- Participation in CI/CD routines and test development with Cypress and Jest, ensuring continuous quality throughout the delivery cycle.

Product Designer Sep 2022 - Jan 2023
Educbank *Campina Grande, Paraíba, Brazil*

- Design and documentation of a complete Design System and Style Guide, establishing a unique visual language for a platform serving more than 500 schools across Brazil.
- Design of high-fidelity interfaces for the tuition guarantee and school cash flow system, translating complex financial business rules into intuitive journeys.
- Creation of a standardized component library in Figma, reducing technical rework and time-to-market.
- Optimization of financial dashboard usability, reducing users' cognitive load.
- Validation of high-fidelity prototypes for new receivables anticipation features.

Projects

Pago parcelado | Angular (6+), RxJS, i18n, Yup, Angular Material Website

- Enabled the processing of new types of government payments (GRUs and court fees) by modernizing financial features in Angular, with 300K+ transactions and R$ 72M+ processed in the first 30 days of integration with PagTesouro.
- Integrated the 3DS security protocol into the checkout flow, increasing authentication rigor and actively reducing fraud rates in credit card transactions.

Harpia AI | React.js, Next.js, TypeScript, Context API, Tailwind CSS, i18n, Cypress, Husky, Conventional Commits, CI/CD Website

- Structured the Harpia front-end architecture, an AI agent that analyzes legal documents of up to 3,000 pages, focusing on performance and scalability. Implemented quality standards with Husky, ESLint and Conventional Commits, plus a testing infrastructure with Cypress and CI/CD pipelines to ensure high maintainability.

Beeteller Internacional | Angular, RxJS, i18n, Yup, Angular Material Website

- Evolved the front-end ecosystem using Angular and RxJS to manage complex reactive flows, sustaining a scalable cross-border operation that serves more than 40,000 points of sale worldwide.

Sendyu | React.js, Context API, Tailwind CSS, i18n, React Hook Form, Yup, Cypress, CI/CD Website

Education

Federal University of Campina Grande (UFCG) Graduated: Jun 2024
Bachelor of Science in Computer Science 8.85

Relevant Coursework: Algorithms, Data Structures, Software Engineering, Software Architecture.

Technical Skills

Languages: Javascript, Typescript, HTML5, CSS3
Frameworks/Libraries: React.js, Next.js, React Native, Angular, RxJS, Expo, Cypress, Jest, Tailwind CSS, Styled-Components, i18n, Zod, Yup, React Hook Form, Design System, Testing Library, React Query, Context API
Cloud/Infra: CI/CD, Github Actions, Git Flow, Git

Certifications

- **State Management (Redux and Zustand)** | Rocketseat Apr 2026
- **Accessibility with React** | Rocketseat Apr 2026
- **React Training Path** | Rocketseat Apr 2026
- **NLW Operator – Fullstack** | Rocketseat Mar 2026
- **Introduction to Real User Monitoring (RUM)** | Datadog Oct 2025
- **Scrum Fundamentals Certified (SFC)** | SCRUMstudy Jun 2021
